Stories from the AHS

To get some of the flavor of this survey, it helps to look at particular families and understand their stories. To illustrate, we describe here just two families, from the tens of thousands who have generously given their time to answer the questions of the AHS interviewers.

The first family in the 1974 file is an elderly white couple, renting a 6 room single family house in a rural non-metropolitan area in the South, not on a farm (control no. 10010290011). The husband is 85-87 years old, and the wife is 82. They have lived in the same house since before 1949 and pay $15 per month in rent and $46 per month in utilities. They say their housing is poor, but they think the neighborhood is excellent. Their main source of heat is a fireplace, and they lack complete plumbing and kitchen equipment. They say they receive $1,321 per year from Social Security, $1,664 from SSI, and $40 of interest, for a total of $3,025 per year. In **1975** they say they receive $1,812 of Social Security, $1,248 from SSI, and no interest, for a total of $3,060. In **1976** they do not answer the Social Security question, and we 'allocate' $1,208. They report $600 from SSI, so we calculate a total of $1,808. According to SSI rules, the total of SSI and Social Security should have been between about $2,700 and $3,640 in 1974-76, depending on which southern state the couple lived in, so this family's answers are reasonable, though the allocated amount seems too low. We do not know what happened to this couple after 1976, since we cut back our sample and never went back to this home.

Of the houses which stayed in the file from 1974-83, one of the first is another single family house in a rural non-farm, non-metropolitan area in the South (control no. 10010410031). The house is owned by a white family: 38 year old husband, 32 year old wife, 14 year old daughter, and 7 year old son. They have lived in the house since it was new in the early sixties. In 1974 they say it is worth $5-7,500, and they have no mortgage. Annual taxes are $36 and monthly utilities are $55. They say both housing and neighborhood quality are good. Their main source of heat is a fireplace. They have 5 rooms, two bedrooms, a bathroom, complete plumbing, complete kitchen, and two room air conditioners. They report $1,800 annual wages from the wife's job and $5,000 from a non-farm business they own, for a total of $6,800. In **1975** they report both these same amounts, but as wages: $1,800 for the wife again, and $5,000 for the husband, with no business income. (They also get an unvented kerosene heater in 1975.) In **1976** the wife's wages go up to $2,000. The family does not answer the questions on the husband's wages or the business. We 'allocate' $12,000 for each of these items, so we calculate a total of $26,000. In **1977** the wife's wages rise to $2,400, the husband's wages are $5,600, and the business disappears, so we calculate a total income of $8,000. They convert another room to a bedroom in **1977**, presumably so the 17 year old daughter and 10 year old son no longer have to share. They now have 3 bedrooms, but still only 5 rooms in all and one bathroom. In **1978** the wife's wages fall back to $2,000 the husband's wages are $6,000, and the daughter, now 18, earns $650, for a total of $8,650. Also another son is born! The older son is now 11, the mother 36, and the father 42. The house is now worth $15-17,500, annual taxes are $57, and monthly utilities are $180, so housing costs are 26% of income. In **1979** the wife's wages fall to $1,000, probably because of the new baby, but the husband's rise to $16,000 and the daughter earns $500, for a total of $17,500. Also they install a vented room heater in 1979. In **1980** the wife's wages go back up to 2,300, the husband's and daughter's wages are

zero, but the non-farm business brings in $7,000, for a total of $9,300. In **1981** the wife's wages rise to $2,700 and the business brings in $10,000, for a total of $12,700. In **1983** (no survey in 1982) the 23 year old daughter has left home. The wife earns $2,400. They do not answer the question on how much the business bring in, and we 'allocate' $2,500, for a total income of $4,900. At this interview the husband is 47, the wife 41, the sons 16 and 5. The house is worth $17,500-20,000, the taxes are $63 per year, and the monthly utilities are $270. Thus housing costs appear to be 67% of income, though that includes allocated income. They still have two room air conditioners, 5 rooms, 3 bedrooms, and a bathroom. We never went back to this family, since we selected a completely new sample of housing units after 1983. (summarized by P. Burke)

QUICK REFERENCE LIST OF MAJOR AHS VARIABLES, WITH CODES USED ON 1985 NATIONAL SURVEY

The questionnaire at the back of any AHS publication and the codebook show many other questions. Most variables have a code for not applicable (e.g. for vacant units or non-interviews) which is the digit 9, repeated for as many columns as the variable has (e.g. 9, 99, 9999). Exceptions are listed.

these will be used
