PREFACE AND ACKNOWLEDGMENTS

This report presents data from the Annual Housing Survey, which was sponsored by the U.S. Department of Housing and Urban Development and conducted by the U.S. Bureau of the Census. It was developed under the direction of Arnold H. Diamond, Special Assistant to the Deputy Assistant Secretary for Economic Affairs, Department of Housing and Urban Development; and Arthur F. Young, Chief, Housing Division, Bureau of the Census.

Arnold H. Diamond, Duane McGough, and David Yentis were responsible for overseeing the Annual Housing Survey and the resultant report on behalf of the Department of Housing and Urban Development.

Within the Bureau of the Census, this report was developed in the Housing Division. It was prepared under the supervision of Leonard J. Norry, Assistant Division Chief, by Elmo E. Beach, Chief, Current Surveys Branch, assisted by Aneda E. France, Edward D. Montfort, and George Spraggins. Specific activities related to data collection procedures, statistical presentation, organization of the report, and preparation of text materials were performed by Edward Cary Bean Jr., Robert W. Bonnette, Mary C. Carroll, Margaret W. Harper, Paul P. Harple, Jr., Patricia A. Holloway, Richard G. Knapp, Mary A. Knoll, Richard G. Kreinsen, Jane S. Maynard, Marjorie Shelton, Janet A. Tippet, and Jeanne M. Woodward. Important contributions were made by Aaron Josowitz, Nathan Krevor, and Herbert Shapiro in the planning and coordination of the survey.

The operational aspects of the Annual Housing Survey were coordinated by the

Demographic Surveys Division under the direction of Earle J. Gerson, Chief, by Stanley Greene, Assistant Division Chief, and Edward F. Knowles, assisted by John C. Cannon and Joan F. Garrett. Systems and processing procedures were performed under the direction of Barry M. Cohen, Assistant Division Chief. The computer programming and processing were performed under the supervision of D. Richard Bartlett, assisted by Merritt Woodard, Margaret Goldsworth, Robert St. Laurent, and Lee Rian. Leonard Goldberg, assisted by David B. Lipscomb and Robert Smith, Jr., was responsible for the clerical and keying procedures.

The planning of sample design, weighting, and computation of sampling variances were developed in the Statistical Methods Division under the supervision of Morton Boisen, Charles Jones, and Gary Shapiro, by David Bateman, Dennis Schwanz, and Mason Malmuth. The implementation of the sample selection was performed under the supervision of David Diskin and Leonard Baer, by Jerome Roth and Patricia Clark (Data Preparation Division, Jeffersonville, Indiana). The standard errors were computed under the supervision of David Diskin, by Robert Aquilino and Robert Jewett. Implementation of field sample control and reinterview procedures was carried out under the supervision of Irene C. Montie, by Fay F. Nash and John J. Paletta. Reinterview design and analysis was conducted under the supervision of Irwin Schreiner.

Data collection activities were administered by the Field Division under the supervision of Richard C. Burt, Chief; by Stanley D. Matchett, Assistant Division

Chief; Dean C. Schroeder, and Kenneth A. Frail as well as the directors of the Bureau's regional offices.

Clerical processing of the questionnaires was performed in the Data Preparation Division under the direction of O. Bryant Benton, Chief, by Don L. Adams and Harry Myers.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

GENERAL

This report presents final statistics on financial characteristics of the housing inventory from the 1974 Annual Housing Survey for the United States by inside and outside standard metropolitan statistical areas (SMSA's) and each of the four geographic regions. Data are shown on income, value, and gross rent cross-tabulated by housing and household characteristics. In contrast to advance report part C, this report contains the additional information on financial characteristics which was collected for the first time in the 1974 survey. The Annual Housing Survey was designed to provide a current series of information on the size and composition of the housing inventory, the characteristics of its occupants, the changes in the inventory resulting from new construction and from losses, the indicators of housing and neighborhood quality, the characteristics of recent movers, and the characteristics of urban and rural housing units. The survey, performed for the Department of Housing and Urban Development is authorized under sections 501 and 502(d), 502(e), and 502(f) of the Housing and Urban Development Act of 1970, Title 12, United States Code 1701z-1 and 1701z-2. The Bureau of the Census is authorized under Title 31, United States Code 686, to perform special work or services for Federal agencies.

The statistics presented in this report are based on information from a sample of housing units. The information for the survey was collected by personal interview from August to October 1974.

This report series consists of six parts (see list on page III) issued jointly by the Department of Housing and Urban Development and the Bureau of the Census. Part A provides data on general housing characteristics, part B on indicators of housing and neighborhood quality, part C on financial characteristics, part D on recent mover households, part E on urban and rural housing characteristics, and part F on financial characteristics cross-classified by indicators of housing and neighborhood quality. Part E is being published for the first

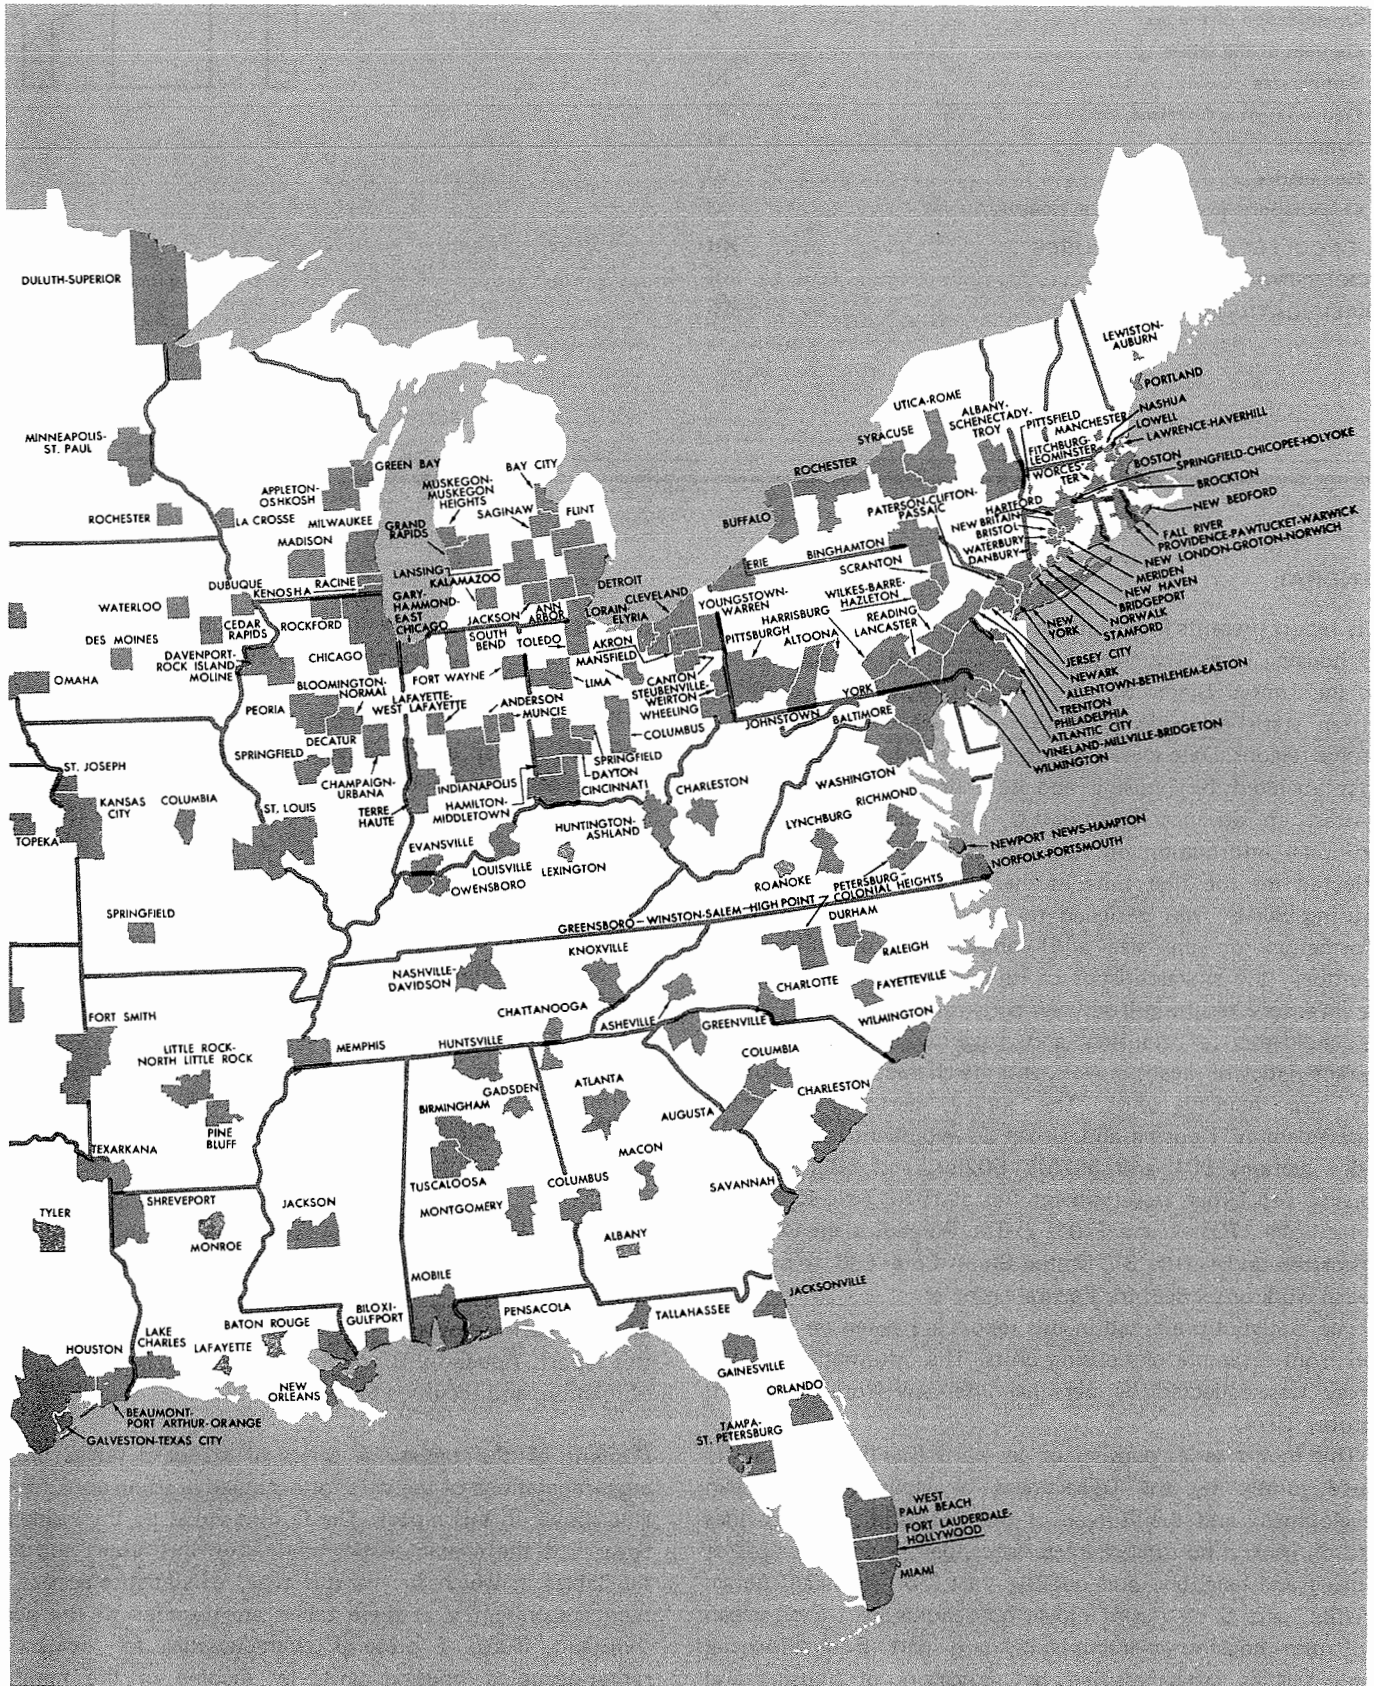

time as part of the 1974 final reports publication program. Part F was first published as part of the 1973 publication program as series H-151-73, report No. 1.

The content and procedures of the Annual Housing Survey were determined after consultation with a variety of users of housing data and through field pretesting. A large portion of the subjects covered in this report are the same as those collected in the 1970 Census of Housing; in general, these data are comparable to those shown in the 1970 census reports. In addition, a number of new items were introduced in this survey on subjects such as distance and travel time from home to work for the household head, storm windows and doors, insulation, breakdowns or failures in equipment, the physical condition of the structure, and neighborhood conditions and services.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233.

Organization of the text.—The text consists of this introduction and appendixes A and B, which appear after the data tables. Appendix A describes the geographic area classifications and provides definitions and explanations of the subjects covered in this report. Appendix B presents information on sample design, estimation, and accuracy of the data.

Content of the tables.—A series of standard tables presents cross-tabulations of the data for occupied housing units for each area shown in this report. The finding guide on the inside back cover lists the characteristics covered in this report and shows the tables in which the various types of statistics appear. The numbers presented in these tables are rounded to the nearest thousand. Table 1 presents characteristics for owner- and renter-occupied housing units by income of the family or primary individual; table 2, characteristics for owner-occupied,

DATA COLLECTION PROCEDURES

The 1974 Annual Housing Survey was conducted by enumerators who made personal visits to each sample unit and obtained the information from the occupants or, if the unit was vacant, from informed persons (landlords, renter agents, or knowledgeable neighbors). The information reported by the enumerator reflected the situation at the time of enumeration, which began in August and extended through October 1974.

Data were collected for sample housing units located in the counties and independent cities comprising the 461 sample areas used in current surveys of the Census Bureau. A sample of housing units was selected in these areas from the 1970 census and updated by a sample of addresses from building permits to include housing units added since 1970. Estimates of the counts and characteristics of the 1974 inventory were obtained for these sample units.

A more detailed description of the survey design and sampling procedures can be found in appendix B.

PROCESSING PROCEDURES

The questionnaires used for the 1974 Annual Housing Survey were of the conventional type, on which the enumerator recorded the information by marking a precoded check box or by writing in the entries. Census clerks edited and coded the schedules. The information from the questionnaires was data keyed directly to magnetic tape which was processed on the Census Bureau's computers through a number of editing and tabulating steps. A facsimile of the questionnaire appears in appendix A.

QUALIFICATIONS OF THE DATA

Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained from a complete census, using the same schedules, instructions, and enumerators. Particular care should be exercised, therefore, in the interpretation of figures based on relatively small numbers of sample cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting and to sampling variability. For a further discussion of accuracy of the data, see appendix B.

The concepts and definitions of most of the items in this report are essentially the same as those used for the 1970 census. The SMSA boundaries are the same as those in the 1970 census. For historical comparisons and boundary changes, refer to the census reports of 1960 and earlier.

In making comparisons between the 1974 survey and 1970 Census of Housing results, differences in the data may reflect such factors as the use of direct interview for 1974 contrasted with the extensive use of self-enumeration in 1970, the sample design, the estimation procedure used, the sampling variability of the estimates, and the processing procedures. See the section on "Comparability with 1970 Census of Housing data" in appendix A for further discussion.

In addition, according to the 1970 Census Evaluation and Research Program, the 1970 count of 68.7 million housing units is understated by approximately 1.5 million units which were missed in the 1970 census. See the section on "Estimates of Change in the Inventory" in the summary of findings, Series H-150-73A, **General Housing Characteristics**, and Series PHC(E)-5, **The Coverage of Housing in the 1970 Census**, for further discussion.

Statistics on value, rent, and income for both 1970 and 1974 are measured in current dollars (the value at the time the data were collected). Therefore, a significant part of the increase between 1970 and 1974 reflects the 32.8 percent rise in the cost of living during the 4 1/2-year period, as measured by the Consumer Price Index, as well as changes in the housing inventory.

In this report, statistics on income relate to the income of the family or primary individual. Therefore, no data are provided on household income; i.e., income of persons unrelated to the head of the household is excluded.

Statistics for some of the characteristics shown in this report are based on restricted universes and, therefore, care should be exercised in relating the statistics for one characteristic to another. For example, value is restricted to owner-occupied, one-family homes on less than 10 acres and no business on property, and gross rent is restricted to renter-occupied units excluding one-family homes on 10 acres or more. Therefore, the totals for owner-occupied units in the "value" universe and for renter-occupied units in the "gross rent" universe do not agree with the totals for some of the income universes.

See appendix A for a more detailed discussion of the definitions and qualifications of all items in this report.

INTRODUCTION—Continued

one-family homes by value of property; and table 3, characteristics for renter-occupied housing units by gross rent. The same subject content as shown in tables 1 through 3 is presented for housing units with Negro head of household in tables 4 through 6 and for housing units with household head of Spanish origin tables 7 through 9.

The prefix letter "A" has been assigned to the tables for the United States as a whole, "B" to the Northeast region, "C" to the North Central region, "D" to the South region, and "E" to the West region.

Sample size.—The statistics presented in this report are based on a sample of housing units and are, therefore, subject to sampling variability. The designated sample consisted of approximately 78,000 housing units located throughout the United States. The sample was selected from units enumerated in the 1970 census and updated to include units constructed since 1970. Detailed information on the sample design, size of sample, estimation procedure, and sampling variability associated with these data is given in appendix B.

Derived figures (medians, etc.).—Shown in this report are medians, means, and ratios. The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half the cases fall below the median and one-half the cases exceed the median. Derived figures are not presented (but indicated by three dots "...") if there are less than 25 sample cases in the distribution or the base.

Medians for rooms and persons are rounded to the nearest tenth, for value and income to the nearest hundred dollars, and for rent to the nearest dollar. In computing medians for rooms and persons per housing unit, the whole number is used as the midpoint of the interval so that, for example, the category "4 rooms" is treated as an interval ranging from 3.5 up to 4.5 rooms. In computing median rent, units reported as "no cash rent" are excluded. The medians are generally computed on the basis of the distributions as shown in this report.

The mean real estate taxes last year is rounded to the nearest dollar and is the only data shown for real estate taxes. Thus, the mean is computed on the basis of the distribution as tabulated.

When the median falls in the lower terminal category of an open-end distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus, for example, if the median falls in the category "Less than \$5,000," it is shown as "\$5,000—." When the median falls in the upper terminal category of an open-end distribution, the method of presentation is to show the initial value of the terminal category followed by a plus sign; thus, for example, if the median falls in the category "\$35,000 or more," it is shown as "\$35,000+."

Symbols.—A dash "—" signifies zero. Three dots "... " in a data column mean not applicable or that the base for a derived figure

is too small for it to be shown. "NA" means not available.

Boundaries.—The data shown in this report relate to the areas defined for the 1970 census. See appendix A for a discussion of these areas. Additional information and definitions of the 1970 boundaries are given in the 1970 Population Census PC(1)-A reports.

Other reports from the Annual Housing Survey.—In addition to the six basic reports in the Annual Housing Survey Series H-150, one or more supplementary reports (Series H-151) may be published for the United States. Also, as part of the 1974 H-150 series, four advance reports containing preliminary data from the 1974 survey were published for parts A through D; these reports will be superceded by the publication of final reports A through D.

A series of reports (H-170) similar to H-150 will also be published for 60 selected standard metropolitan statistical areas. The data for the SMSA's are based on an independent sample of the 60 SMSA's divided into 3 groups of approximately 20 each, with one group interviewed every 3 years on a rotating basis. Enumeration for the first group began on April 1, 1974, and continued through March 1975; enumeration for the second group began on April 1, 1975, and continued through March 1976. Publication of the first group is scheduled for the summer of 1976. Below is a list of the SMSA's in each group:

GROUP I	GROUP II	GROUP III

have been defined for general statistical purposes by the State in cooperation with the Census Bureau and are treated as county equivalents. Four States (Maryland, Missouri, Nevada, and Virginia) contain one or more cities that are independent of any county; for statistical purposes these independent cities are treated as county equivalents.

Standard Metropolitan Statistical Areas

The definitions of standard metropolitan statistical areas used in the Annual Housing Survey correspond to the 243 SMSA's used in the 1970 census. These include the 228 SMSA's as defined and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. After 1967, 15 SMSA's were added, of which 2 were defined in January 1968 and an additional 13 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA definition criteria, boundaries, and titles made after February 1971 are not reflected in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

In this report, figures for "in central cities" refer to all housing units within the legal city boundaries. For a few central cities, the figures include some housing units in parts of the city classified as rural in the 1970 census.

DEFINITIONS AND EXPLANATIONS OF SUBJECT CHARACTERISTICS

General

As stated in the introductory text of this report, the 1974 Annual Housing Survey was conducted by direct interview. The survey enumerators were instructed to read the questions directly from the questionnaire. The definitions and explanations given below for each subject are to a considerable extent drawn from various technical and procedural materials used in the collection of the data. This material helped the enumerative personnel to understand more fully the intent of each question and thus to resolve problem or unusual cases. Additional explanatory information has been added to this portion of the text to assist the user in the proper utilization of the statistics.

Comparability with 1973 Annual Housing Survey.—The concepts and definitions are essentially the same for items that appear in both the 1974 advance reports and the 1973 reports. Because of the relatively small sample size, particular care should be taken in making year to year comparisons, especially where there are small differences between the figures.

Comparability with 1970 Census of Housing data.—The data presented in this report are generally comparable to those shown in the 1970 census reports, particularly to the cross-tabulations shown in the 1970 Census of Housing, Volume II, **Metropolitan Housing Characteristics**. The concepts and definitions are essentially the same for items that appear in both the 1970 census and the 1974 survey. Definitional differences, if any, are discussed under the particular subject later in this section. Additional differences between the 1974 Annual Housing

Survey data and the 1970 census data may be attributed to several factors. These include the extensive use of self-enumeration in the census in contrast to direct interview in the Annual Housing Survey; differences in processing procedures; the estimation procedures and sample designs; the sampling variability of the estimates from the Annual Housing Survey; to a smaller extent, the sampling variability associated with the sample data from the census; the nonsampling errors associated with the Annual Housing Survey estimates; and the nonsampling errors associated with the census estimates.

Data as of 1970 for "mortgage on property" and "real estate taxes last year" are presented in the 1970 Census of Housing Volume V, **Residential Finance**. In Volume V, the data are based on information collected for a sample of housing units in the Residential Finance Survey which was conducted in 1971 as part of the 1970 census. The 1970 report provided data on the financing of homeowner and rental properties, including characteristics of the mortgages, properties, and homeowners.

Differences in the concepts and definitions between the data in this report and Volume V include the following. The basic unit of tabulation in this report is the housing unit; in Volume V, it is the property. Data on mortgage status in this report are based on the occupant's answer; in Volume V, mortgage status of the property was verified by the lender. In this report, real estate taxes reflect the total amount of real estate taxes excluding special assessments such as sewer taxes, road improvement taxes, and tax collection charges; in Volume V, real estate taxes *include* special assessments.

Comparability with other current reports.—This report contains some information similar to that contained in the Current Population Reports published by the Bureau of the Census. Because of procedural differences mentioned below, care should be taken when comparing data from the Annual Housing Survey with data from other current surveys.

Current Population Reports from the Current Population Survey.—The Current Population Survey (CPS) is a monthly sample survey of approximately 58,000 designated sample units. From the data collected in the Current Population Survey, the Bureau issues several publications under the general title Current Population Reports. Included are reports on household and family characteristics, mobility of the population, and income.

Although the concepts and definitions used in this report are essentially the same as those used in the Current Population Reports and the intent of both the Annual Housing Survey and the Current Population Survey is the same, there are likely to be significant differences in the income data. The time period covering income is different in that in this report income covers the 12 months prior to the date of enumeration while the income data in the Current Population Survey refer to the calendar year prior to the date of enumeration. There are also significant differences in the way income questions are asked. Additional differences between the 1974 Annual Housing Survey and the Current Population Survey may be attributed to factors such as the sampling variability and nonsampling errors of the figures from the two surveys, survey procedures and techniques, and processing procedures.

Current Population Reports from the Survey of Purchases and Ownership.—The 1974 Survey of Purchases and Ownership is a sample survey, covering approximately one-third of the 78,000 designated sample units in the 1974 Annual Housing Survey. Data are collected on ownership, availability, and recent purchases of automobiles and other vehicles, television sets, and selected major household appliances. Information on the price paid is obtained for recently purchased items. The data will be available in the Current Population Reports, Series P-65, **Consumer Buying Indicators**.

Although the Survey of Purchases and Ownership was taken in conjunction with the Annual Housing Survey, there are

differences in the concepts and definitions between the two. For example, the data on automobiles and other four-wheel vehicles, such as pickup trucks and passenger vans, collected in the Survey of Purchases and Ownership reflect the number of such vehicles that are owned or being bought by a member of the family. The data collected in the Annual Housing Survey reflect the number of automobiles or trucks owned or regularly used by any member of the household, including nonrelatives. Additional differences may be attributed to such factors as estimation procedures, sampling variability, and nonsampling errors.

Living Quarters

Living quarters are classified as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, boarding house, or mobile home or trailer). Living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a watchman lives), as well as in places such as tents, caves, and old railroad cars.

Housing units.—A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hall which is used by the occupants of another unit or by the general public or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the section on group quarters). For vacant units, the criteria of separateness, direct access, and complete kitchen facilities for exclusive use are applied to the intended occupants whenever possible. If the information cannot

be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing inventory, except that mobile homes, trailers, tents, caves, boats, railroad cars, and the like, are included only if they are occupied.

Group quarters.—Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons. Information on the housing characteristics of group quarters was not collected.

Rules for mobile homes, hotels, rooming houses, etc.—Mobile homes or trailers, tents, boats, or railroad cars are not considered housing units if vacant, used only for business, or used only for vacations.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; i.e., persons who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have either direct access or complete kitchen facilities for exclusive use, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain four or fewer roomers unrelated to the head, they are classified as one housing

unit; if the combined quarters contain five or more roomers unrelated to the head or person in charge, they are classified as group quarters. In a dormitory, residence hall, or similar place, living quarters of the supervisory staff and other employees are separate housing units if they satisfy the housing unit criteria; other living quarters are considered group quarters.

Institutions.—Living quarters of staff personnel are separate housing units if they satisfy the housing unit criteria. Other living quarters are considered group quarters.

Occupancy Characteristics

Occupied housing units.—A housing unit is classified as occupied if a person or group of persons is living in it at the time of enumeration or if the occupants are only temporarily absent—for example, on vacation. However, if the unit was occupied entirely by persons with a usual place of residence elsewhere, the unit is classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

Race.—The classification by race shown here refers to the race of the head of the household occupying the housing unit. The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. The classification of race in the 1974 Annual Housing Survey was made by the enumerator based on his own observation. In the 1970 census, race was essentially a self-classification by people according to the race with which they identified themselves. Detailed characteristics of units with Negro head of household are presented in separate tables.

Spanish origin.—The classification by Spanish origin here refers to the origin of the head of the household occupying the housing unit. Detailed characteristics of units with head of Spanish origin are presented in separate tables. Spanish origin was determined on the basis of a

question that asked for self-identification of a person's origin or descent. Respondents were asked to select their origins from a "flash card." Persons of Spanish origin were those who indicated that their origin was either Mexican-American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Spanish.

In the 1970 census and current surveys' reports, Spanish persons are identified according to various criteria: Birthplace, birthplace of parents, language, surname, and origin or descent. For this reason, care should be taken in making comparisons of Spanish origin estimates from the Annual Housing Survey and other surveys.

Tenure.—A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Year head moved into unit.—Data on year moved into unit are based on the information reported for the head of the household. The question refers to the year of latest move. Thus, if the head moved back into a unit he had previously occupied, the year of his latest move was to be reported; if he moved from one apartment to another in the same building, the year he moved into his present unit was to be reported. The intent is to establish the year the present occupancy by the head began. The year the head moves is not necessarily the same year other members of the household move, although in the great majority of cases the entire household moves at the same time.

Owner or manager on property.—These statistics are presented in terms of the number of housing units in structures of two or more units with the owner or the resident manager or superintendent living on the property. The category "with

owner on property" refers to the owner and not his agent, resident manager, or superintendent. "With resident manager or superintendent on property" refers to a resident manager, superintendent, janitor, or other representative of the owner.

Utilization Characteristics

Persons.—All persons occupying the housing unit are counted. These persons include not only occupants related to the head of the household but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the household head. The data on "persons" show the number of housing units occupied by the specified number of persons.

A person is enumerated at his usual place of residence. This refers to the place where the person lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile.

Rooms.—The statistics on "rooms" are in terms of the number of housing units with specified number of rooms. Rooms counted include whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, permanently enclosed porches that are suitable for year-round use, and lodger's rooms. Also included are rooms used for offices by a person living in the unit.

A partially divided room, such as a dinette next to a kitchen or living room, is a separate room only if there is a partition from floor to ceiling, but not if the partition consists only of shelves or cabinets.

Not included in the count of rooms are bathrooms, halls, foyers or vestibules, balconies, closets, alcoves, pantries, strip or pullman kitchens, laundry or furnace rooms, unfinished attics or basements, other unfinished space used for storage, open porches, trailers used only as bedrooms, and offices used only by persons not living in the unit.

If a room is used by occupants of more than one unit, the room is included with the unit from which it is most easily reached.

Persons per room.—"Persons per room" is computed for each occupied unit by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of persons per room.

Bedrooms.—The number of bedrooms in the unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping such as guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a hideaway bed, are not considered bedrooms. A housing unit consisting of only one room, such as one-room efficiency apartment, is classified, by definition, as having no bedroom.

Structural Characteristics

Complete kitchen facilities.—A unit has complete kitchen facilities when it has all three of the following for the exclusive use of the occupants of the unit: (1) An installed sink with piped water, (2) a range or cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An icebox is not included as a mechanical refrigerator.

The kitchen facilities are for the exclusive use of the occupants when they are used only by the occupants of one housing unit, including lodgers or other unrelated persons living in the unit. When a structure consists of only one housing unit, all equipment located inside the structure is classified, by definition, for exclusive use.

Basement.—Statistics on basements are presented in terms of the number of

housing units located in structures built with a basement. A structure has a basement if there is enclosed space in which persons can walk upright under all or part of the building.

Year structure built.—Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. The figures relate to the number of units in structures built during the specified periods and in existence at the time of enumeration. For mobile homes and trailers, the model year was assumed to be the year built.

Units in structure.—In the determination of the number of units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented in terms of the number of housing units in structures of specified type and size, not in terms of the number of residential structures.

A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof.

Mobile homes and trailers are shown as a separate category. When one or more rooms have been added to a mobile home or trailer it is classified as a one-family house. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer.

Elevator in structure.—Statistics on elevator in structure are presented in terms of the number of housing units in structures with four floors or more which have a passenger elevator. Units are in a "walk-up" structure of four floors or more if the structure has no passenger elevator or if the only elevator service is for freight.

Garage or carport on property.—Counts of units with a garage or carport on the property are shown only for owner-occupied one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. The garage or carport must be

currently available for use by the occupants of the unit; i.e., the members of the household can use it for parking even if it is currently used as a storage area for items such as lawn equipment or furniture. It may be attached to the house or it may be completely unattached, but it must be on the property. Excluded are garages or carports that have been converted to other uses such as living quarters, and extra room for business purposes; rented to someone else; or for some reason cannot be used for parking.

Plumbing Characteristics, Equipment, and Fuels

Plumbing facilities.—The category "with all plumbing facilities" consists of units which have hot and cold piped water inside the structure as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. All plumbing facilities must be located in the structure but they need not be in the same room. "Lacking some or all plumbing facilities" means that the unit does not have all three specified plumbing facilities (hot and cold piped water, as well as flush toilet and bathtub or shower inside the structure), or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

Complete bathrooms.—A housing unit is classified as having a complete bathroom if it has a room with a flush toilet and bathtub or shower and a wash basin, as well as piped hot water in the structure for the exclusive use of the occupants of the unit. A half bathroom has either a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

The category "none or also used by another household" consists of units with no bathroom facilities, units with only a half bathroom, units with bathroom facilities which are also for the use of the occupants of other housing units, and units with all bathroom facilities but not in one room.

Source of water.—"A public system or private company" refers to a common source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well which supplies six or more housing units. If a well provides water for five or fewer housing units, it is classified as an "individual well." Water sources such as springs, creeks, rivers, etc., are included in the "other" category.

Flush toilet, water supply, sewage disposal, and heating equipment.—Data on breakdowns or failures of flush toilet, water supply, and sewage disposal are shown if the housing unit was occupied by the head of the household at least 3 months prior to enumeration and if the breakdown or failure lasted 6 consecutive hours or longer during the 3 months prior to enumeration. For breakdowns or failures of heating equipment, data are shown for units occupied by the household head during the winter prior to enumeration if the equipment was unusable for 6 consecutive hours or longer during that time. To qualify as having lived here "last winter," the household head must have moved into the unit prior to the previous February. Further discussion of each item is given below:

Flush toilet.—The statistics on breakdowns or failures of flush toilet are limited to units that had all plumbing facilities with only one flush toilet, that is, one complete bathroom or one complete bathroom plus a half bath without flush toilet. The flush toilet may be completely unusable because of broken pipes, stopped up soil pipe, lack of water supplied to the flush toilet, or some other reason.

Water supply.—Breakdowns or failures in the water supply were asked when the unit had piped water inside the structure. The water may be available from sources such as a sink, wash basin, bathtub, or shower. A unit is classified as having no piped water inside structure if the unit has no piped water or if the only piped water

available is outside the structure, for example, on an open porch or in another building.

Breakdowns or failures in the water supply mean that the unit was completely without running water from its regular source. A unit was considered to be completely without running water if (1) the water system servicing the unit supplied no water at all, or (2) no water was available in the unit due to a breakdown or failure in the water supply inside the structure, or (3) the equipment and facilities (faucets in the kitchen and the bathroom sinks, faucet and shower in the bathtub, flush toilet, etc.) were all inoperable. If the faucet in the kitchen was broken, but the one in the bathtub was working, the unit was not classified as being completely without water.

Sewage disposal.—A "public sewer" is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a governmental body or private organization. A "septic tank or cesspool" is an underground tank or pit used for disposal of sewage. Small sewage treatment plants which in some localities are called neighborhood septic tanks are classified as public sewers. Units for which sewage is disposed of in some other way are included in the "other" category.

The data on breakdowns or failures in the means of sewage disposal are limited to units in which the means of sewage disposal was a public sewer, septic tank, or cesspool. The breakdown or failure may have been the result of an overloaded sewage disposal system, lack of running water, a broken or cracked tank, etc.

Heating equipment.—"Warm-air furnace" refers to a central system which provides warm air through ducts leading to various rooms; central heat pumps are included in this category. "Steam or hot water" refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets.

"Built-in electric units" are permanently installed in floors, walls, ceilings, or baseboards. A "floor, wall, or pipeless furnace" delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed. "Other means" includes room heaters with or without flue, fireplaces, stoves, and portable heaters of all types.

Heating equipment is considered unusable if it cannot be used for the purposes intended; the breakdown or failure may be caused by broken pipes, electrical or gas parts out of order, or downed power lines.

Air conditioning.—Air conditioning is defined as the cooling of air by a refrigeration unit; excluded are evaporative coolers, fans, or blowers which are not connected to a refrigeration unit. A room unit is an individual air conditioner which is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room. A central system is a central installation which air conditions the entire housing unit. In an apartment building, a central system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central installation with individual room controls is a central air-conditioning system.

Automobiles and trucks available.—Statistics on automobiles available represent the number of passenger automobiles, including station wagons, which are owned or regularly used by any member of the household and which are ordinarily kept at home. The figures include leased automobiles, taxicabs and company-owned automobiles kept at home. Police cars, pickups, or larger trucks were not to be counted. In the 1973 Annual Housing Survey, taxicabs kept at home were not included in the count of "automobiles available."

The data on trucks available represent

the number of pickups and small panel trucks of one-ton capacity or less which are owned or regularly used by any member of the household and which are ordinarily kept at home. Trucks used for business purposes were included only if also used for personal activities of household members.

The statistics do not reflect the number of privately owned automobiles or trucks or the number of households owning such vehicles.

Fuels used for house heating and cooking.—"Utility gas" is gas that is piped through underground pipes from a central system and serves the neighborhood. "Bottled, tank, or LP gas" is stored in tanks which are refilled or exchanged when empty. "Fuel oil, kerosene, etc." includes fuel oil, kerosene, gasoline, alcohol, and other combustible liquids. "Other fuel" includes any other fuel such as briquettes made of pitch and sawdust, coal dust, corncobs, or purchased steam.

Owned second home.—A second home may be a single-family house, vacation cottage, hunting cabin, ski lodge, etc., which is owned and held for use sometime during the year by the owner or members of his household. Second homes may also be owned in partnership with members of a different household. The figures include second homes which are sometimes rented or leased on a short-term basis to other persons but are principally held for the owner's occasional use during the year.

The statistics refer to the number of households that own (one or more) second homes. The data, therefore, do not reflect the number of owned second homes.

Financial Characteristics

Value.—Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. The statistics on value are shown only for one-family homes on less than 10 acres, without a commercial establishment or medical or dental office on the property. Owner-occupied cooperatives, condomini-

ums, mobile homes, and trailers are excluded from the value tabulations.

Value-income ratio.—The value-income ratio is computed by dividing the value of the housing unit by the total money income of the family or primary individual. The ratio is presented for the same owner-occupied units for which value was tabulated; thus, the statistics on value-income ratio reflect the exclusion of certain owner-occupied units. The ratio was computed separately for each unit and was rounded to the nearest tenth. In reporting value, respondents were asked to select an appropriate class interval. The midpoints of the value intervals were used in the computation of the value-income ratio, except that a mean of \$2,000 was assigned for values less than \$2,500 and a mean of \$70,000 was assigned for values of \$60,000 or more. For income, the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category “not computed.”

Mortgage status.—The data are limited to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. A mortgage or similar debt refers to all forms of debt where the property is pledged as security for repayment of the debt. It includes such debt instruments as deeds of trust, trust deeds, mortgage bonds, and vendor liens. In such arrangements, the borrower generally has the title to the property. Also included as a mortgage or similar debt, are arrangements such as contracts to purchase and land contracts where the title to the property remains with the lender.

Mortgage insurance.—The data are restricted to owner-occupied units with a mortgage or similar debt. In addition, the units must be one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

A mortgage or similar debt is considered insured if it is currently insured

by the Federal Housing Administration (FHA), the Veterans Administration (VA), the Farmers' Home Administration, or by private mortgage insurance companies. Mortgages or similar debts insured or guaranteed by State or local government agencies are not included.

The Federal Housing Administration insures loans on homes. The Veterans Administration guarantees or insures loans under the Serviceman's Readjustment Act (G.I. Bill). The Farmers' Home Administration provides much the same service as the Federal Housing Administration, but confines its assistance to rural areas. Private mortgage insurance companies insure loans that are not insured or guaranteed by an agency of the Federal government. It should be noted that many conventional loans are not insured or guaranteed at all.

Real estate taxes last year.—The mean real estate taxes for last year per \$1,000 value of the property (house and lot) are presented in this report. The data are restricted to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. “Real estate taxes last year” refers to the total amount of all real estate taxes payable on the entire property during the last billing year. It includes State and local real estate taxes. Not included are payments on delinquent taxes due from prior years or payments for special assessments, facilities, or services such as a sewer tax, road improvement tax, or tax collection charge which are sometimes included with the real estate tax bill. Housing units for which no taxes are paid are excluded from the computation of the mean.

Selected monthly housing costs.—The data are presented for owner-occupied one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. Selected monthly housing costs are the sum of payments for mortgage, real estate taxes, property insurance, utilities (electricity, gas, water, and sewage disposal), fuel (oil, coal, kerosene, wood, etc.), and garbage and trash collection.

Units that paid no mortgage and/or no real estate taxes were included in the “not reported” category.

Selected monthly housing costs as percentage of income.—The yearly housing costs (selected monthly housing costs multiplied by 12) are expressed as a percentage of the total income of the family or primary individual. This percentage is presented for the same owner-occupied units for which “selected monthly housing costs” were tabulated; thus, the statistics on selected monthly housing costs as percentage of income reflect the exclusion of certain owner-occupied units. The percentage was computed separately for each unit and was rounded to the nearest tenth. For income and “selected monthly housing costs” the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category “not computed.”

Units that did not report the amount of mortgage and/or no real estate taxes were included in the “not reported” category.

Acquisition of property.—This item indicates how the current owner acquired the property; i.e., whether by purchase or by means other than purchase. Data are presented for one-family homes which are owned free and clear without a commercial establishment or medical or dental office on the property.

Placed or assumed a mortgage.—This includes units where the present owner had to place one or two new mortgages in order to obtain the property or assume an existing mortgage on the property. The intent was to determine whether the property was ever mortgaged by the present occupants even though there was no mortgage at the time of enumeration.

Acquired through inheritance or gift.—This includes property acquired as a beneficiary of an estate and property acquired through a gift.

Paid all cash.—In these cases, the owner paid cash for the total cost of the property and no mortgage or other debt was involved.

Acquired in other manner.—Includes acquisitions of properties through foreclosure, delinquent tax sale, corporate reorganization, or trade for another property. Also included are those cases in which the owner acquired the property with borrowed funds (for all or part of the purchase price or cost of construction) and this loan was not secured by a mortgage, deed of trust, land contract, etc.

Alterations and repairs during the last 12 months.—The statistics refer to the 12 months prior to enumeration and are restricted to owner-occupied one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

The data are presented according to whether the alterations and repairs cost less than \$100 or \$100 or more. The total cost of the labor and materials was to be reported. However, if the labor was performed by the occupants or provided without charge, only the cost of the materials was obtained. The cost pertains to a single job; for example, if several jobs were done, each costing less than \$100 but the sum total was over \$100, it was reported as costing less than \$100 since none of the jobs by themselves cost \$100 or more.

Additions.—Refers to floor space built onto, above or below an existing unit in order to increase the enclosed space within the house, such as a bedroom or basement added onto a house. It may also be construction of other buildings on the property, for example, a garage.

Alterations.—Permanent changes made either to the inside or outside of a structure including the surrounding grounds. Alterations inside the structure include any type of remodeling resulting in permanent modification of space; for example, construction of a breakfast nook in a kitchen. It may involve completely remodeling a room, such as a kitchen or bathroom, or a structural change such as separation of living and dining areas

by a permanent room divider. It may also include attached equipment installed in the house for the first time; i.e., built-in dishwasher. Alterations outside the structure consist of installing walks, driveways, fences, storm windows or doors, planting trees or shrubbery, or swimming pools built into the ground.

Replacements.—This refers to the complete substitution of a new piece of fixed equipment, surfacing, or fixed appliances for an old item that was previously there. For example, a new gas furnace or central air-conditioning system for one that no longer functioned properly. Excluded are appliances such as clothes washers, refrigerators, or window air-conditioners.

Repairs.—This refers to jobs necessary for maintenance and preventive care of the structure, property, and fixed equipment; for example, painting, papering, floor sanding, mending water pipes, and replacing parts of large equipment such as a furnace valve.

Plans for improvements during the next 12 months.—This item is restricted to owner-occupied one-family homes without a commercial establishment or medical or dental office on the property. This item refers to the respondent's plans, if any, to make improvements on his property (additions, alterations, replacements, or repairs) during the 12-month period following enumeration and whether the labor and/or materials cost more or less than \$100.

Gross rent.—The computed rent termed "gross rent" is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, water) and fuels (oil, coal, kerosene, wood, etc.), if these items are paid for by the renter (or paid for him by someone else, such as a relative, welfare agency, or friend) in addition to rent. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. Thus, gross rent is intended to eliminate differentials which

result from varying practices with respect to the inclusion of utilities and fuel as part of the rental payment. The estimated costs of water and fuels are reported on a yearly basis but they are converted to monthly figures in the computation process.

The statistics on rent exclude one-family houses on 10 acres or more. Renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

Gross rent as percentage of income.—The yearly gross rent (monthly gross rent multiplied by 12) is expressed as a percentage of the total income of the family or primary individual. The percentage is presented for the same renter-occupied units for which gross rent was tabulated; thus, the statistics on gross rent as percentage of income reflect the exclusion of certain renter-occupied units. The percentage was computed separately for each unit and was rounded to the nearest whole number. For gross rent and income, the dollar amounts were used in the computation. Units for which no cash rent is paid and units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

Public or subsidized housing.—A housing unit is classified as being in a "public housing project" if the structure in which the unit is located is owned by a local housing authority or other public agency, such as a housing and redevelopment authority or a housing development agency, and operated as public housing. These organizations may receive subsidies from the Federal or State government but the local agency owns the property. All other housing units are classified as "private housing."

The category "private units with government rent subsidies" refers to units classified as private housing and in which the respondent pays a lower rent because a Federal, State, or local government program pays part of the cost of construction, building mortgage, or operating expenses. These programs include (1) the

interest subsidy programs of the Department of Housing and Urban Development (HUD) for rental and cooperative housing for moderate-income families, (2) the rent supplement program where part of the rent for low-income families occupying certain types of rental housing projects is paid by HUD, and (3) the direct loan program of HUD for housing the elderly.

The statistics on public or subsidized housing exclude one-family homes on 10 acres or more and renter units occupied without payment of cash rent. In addition, the data are not based on government or local records; the figures are, therefore, subject to the ability of a respondent to properly classify his unit as public or private and, if private, as subsidized or unsubsidized housing.

Inclusion in rent (parking facilities, garbage collection, and furniture).—Counts are shown separately for units in which parking facilities, garbage and trash collection, and furniture are included in the rent. The data are restricted to renter-occupied units for which cash rent is paid and exclude one-family homes on 10 acres or more.

Parking facilities.—The statistics refer to off-street parking facilities which are available in connection with the building. The facilities are provided by the landlord or management and must be available without additional cost to the renter. The parking facility may be a garage, carport, driveway, or open lot where the occupant may park his car off the street.

Garbage and trash collection.—Included are units which have garbage and trash collection service available in connection with the building. The service may be public or private and must be available without additional cost to the renter. If the garbage (food waste) is collected by one company and the trash (paper, cans, etc.) by another, the data refer to the garbage collection service. In tables 3, 6, and 9, separate counts are also shown for renter-occupied units reporting additional amounts paid for garbage and trash collection service.

Furniture.—The statistics refer to furnished apartments or houses in which the management supplied major pieces of furniture such as a bed, sofa, chest of drawers, and table and chairs for the use of the occupant. Refrigerator, cooking range or stove, lamps, and rugs are not considered furniture. Units in which the occupants rent furniture from some source other than the management are not classified as furnished units.

Household Characteristics

Household.—A household consists of all the persons who occupy a housing unit. By definition, the count of households is the same as the count of occupied housing units.

Head of household.—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. However, if a married woman living with her husband is reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

Household composition.—Statistics by age of head are presented separately for two-or-more-person households and for one-person households. Households having two or more persons are further subdivided as follows:

Male head, wife present, no nonrelatives.—Each household in this group consists of the head and his wife, and other persons, if any, all of whom are related to him.

Other male head.—This category includes households with male head, wife present, with nonrelatives living with them; male heads who are married, but with wife absent because of separation or other reason where husband and wife maintain separate residences; and male heads who are widowed, divorced, or single.

Female head.—This group comprises households with female heads regardless of their marital status. Included are female heads with no spouse and

female heads whose husbands are living away from their families, as for example, husbands in the Armed Forces living on military installations.

Households consisting of only one person are shown separately as "one-person households" and are not included in the subcategories "other male head" and "female head."

Family or primary individual.—Housing units are occupied by either "families" or "primary individuals." The term "family" refers to the head of a household and all (one or more) other persons living in the same household who are related to the head by blood, marriage, or adoption. If the head lives alone or with nonrelatives only, then the head is considered a "primary individual."

Married couples related to the head of a family are included in the family and are not considered as separate families. A lodger, servant, or other person unrelated to the head is considered a member of the household but not of the family.

In the statistics on household composition, families are always included in one of the three major groups of two-or-more-person households. Primary individuals with nonrelatives living with them are tabulated as "other male head" or "female head." Primary individuals living alone are always tabulated as "one-person households."

Subfamily.—A subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.

Age of head.—The age classification refers to the age reported for the head of the household as of his last birthday.

Own children.—Statistics on presence of "own" children of household heads are

shown in this report. A child under 18 years old is defined as an "own" child if he or she is a single (never married) son, daughter, stepchild, or adopted child of a household head. Own children of sub-families are excluded from the total count of own children.

Nonrelative.—A nonrelative of the head is any person in the household who is not related to the head by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Years of school completed by head.—The statistics refer to the highest grade of regular school completed, not to the highest grade attended. For persons still attending school, the highest grade completed is one less than the one in which they are currently enrolled. "Regular" school refers to formal education obtained in graded public, private, or parochial schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full or part time. That is, "regular schooling" is formal education which may advance a person toward an elementary or high school diploma, or college, university, or professional school degree. Schooling or tutoring in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system. Household heads whose highest grade completed was in a foreign school system or in an ungraded school were instructed to report the approximate equivalent grade (or years) in the regular United States school system. A head was not reported as having completed a given grade if he dropped out or failed to pass the last grade attended. Education received in the following types of schools is not counted as "regular schooling": Vocational schools, trade schools, business schools, and non-credit adult education classes.

Income.—The statistics on income in the Annual Housing Survey are based on the respondent's reply to questions on in-

come for the 12 months prior to enumeration and is the sum of the amounts reported for wage and salary income, net self-employment income, Social Security or railroad retirement income, public assistance or welfare payments, and all other money income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, Medicare deductions, etc.

In this report, the statistics relate to the money income of the family or primary individual occupying the housing unit, that is, the sum of the income of the head of the family and all other members of the family 14 years old and over or the income of the primary individual. Incomes of persons living in the unit but not related to the head of the household are not included in this sum.

Wage or salary income is defined as the total money earnings received for work performed as an employee at any time during the 12-month period prior to enumeration. It includes wages, salary, piece rate payments, commissions, tips, cash bonuses, and Armed Forces pay. Net self-employment income is defined as net money income (gross receipts minus operating expenses) received from a business, professional practice, partnership, or farm in which the person was engaged on his own account.

Social Security or railroad retirement income includes cash receipts of Social Security pensions; survivors' benefits; disability insurance programs for retired persons, dependents of deceased insured workers, or disabled workers; and deductions for Medicare and health insurance premiums. Cash receipt of retirement, disability, and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included. Separate payments received for hospital or other medical care are not included.

Income from all other sources includes money income received from sources such as periodic payments from estates and trust funds; dividends; interest; net

rental income (or loss) from property rentals; net receipts from roomers or boarders; net royalties; public assistance or welfare payments which include cash receipts received from public assistance programs such as old age assistance, aid to families with dependent children, and aid to the blind or totally disabled; unemployment insurance benefits; money received for transportation and/or subsistence by persons participating in special governmental training programs such as the Area Redevelopment Act and the Manpower Development and Training Act; workmen's compensation cash benefits; periodic payments by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans; public or private pensions; periodic receipts from insurance policies or annuities; alimony or child support from persons who are not members of the household; net gambling gains; and nonservice scholarships and fellowships.

Receipts from the following sources were not included as income: Value of income "in kind" such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; money received from the sale of property (unless the recipient was engaged in the business of selling such property); money borrowed; tax refund; withdrawal of bank deposits; accrued interest on "uncashed" savings bonds; exchange of money between relatives living in the same household; and gifts and lump-sum insurance payments, inheritances, and other types of lump-sum receipts.

The income statistics and the characteristics of the household refer to different periods in time; i.e., the income data refer to the 12 months prior to enumeration whereas the household characteristics refer to the date of enumeration. Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the income period if these persons no longer resided with the family at the time of enumeration. On

APPENDIX A—Continued

the other hand, family income includes amounts reported by related persons who did not reside with the family during the

income period but who were members of the family at the time of enumeration. For most families, however, the income

reported was received by persons who were members of the family throughout the income period.

Section III — PURCHASES AND OWNERSHIP (Automobiles and Home Appliances) — Continued

20. (Not including any vehicles which you have traded-in, have you sold or otherwise disposed of a vehicle within the past 12 months; that is, since (month), 1973?)
 (398) 1 Yes — Ask 21 (If more than one, ask 21 for most recently disposed of vehicle)
 2 No — Skip to Check Item A

21. Did you own this vehicle 12 months ago, that is, in (month), 1973?
 (399) 1 Yes — Ask 22
 2 No — Skip to Check Item A

22. What type of vehicle was it?
 (400) 1 Car, station wagon
 2 Pickup truck
 3 Passenger van (with windows)
 4 Motor home (self contained)
 5 Other vehicle

23. What was the model year?
 (401) 19 _____

24. How many cylinders did it have?
 (402) 1 None (rotary)
 2 Four
 3 Six
 4 Eight

CHECK ITEM A
 (See section I, Items 46a—c, page 8)
 Household has one or more room air conditioners — Ask 25a
 Household has central air conditioning only } Skip to 26
 Household has no air conditioning

25a. Within the past 12 months; that is, since (month), 1973 have you or another family member purchased a room air conditioner?
 (403) Yes — How many?
 1 1
 2 2 or more
 3 No — Skip to 26

b. Was it purchased new or used?
 (404) 1 New
 2 Used

c. How much did it cost?
 (405) \$ _____ (406) \$ _____ (407) \$ _____

26. How many black and white television sets do you have in your home?
 (408) 1 None
 2 One
 3 Two
 4 Three or more

27. How many color television sets do you have in your home?
 (409) 1 None
 2 One
 3 Two
 4 Three or more

28a. Have you or another family member purchased a television set within the past 12 months, that is, since (month), 1973?
 (410) Yes — How many?
 1 1
 2 2 or more
 3 No — Skip to 29a

b. Was it a black and white or color set?
 (411) 1 Black and white
 2 Color

c. Was it purchased new or used?
 (413) 1 New
 2 Used

d. How much did it cost?
 (415) \$ _____ (416) \$ _____

Section III — PURCHASES AND OWNERSHIP (Automobiles and Home Appliances) — Continued

3. What kind of vehicle is your (third newest vehicle, fourth newest vehicle) — a car, station wagon, truck or what?
 (362) Third newest vehicle
 Fourth newest vehicle
 (363) 1 Car, station wagon
 2 Pickup truck
 3 Passenger van (with windows)
 4 Motor home (self contained)
 5 Other vehicle

4. What is the model year?
 (364) 19 _____

5. How many cylinders does it have?
 (365) 1 None (rotary) 3 Six
 2 Four 4 Eight

6. Was this vehicle new or used when you purchased it?
 (366) 1 New — Skip to 8
 2 Used — Ask 7

7. Was it purchased from an automobile dealer or a private party?
 (367) 1 Auto dealer
 2 Private party

8. Is it used for any business purpose other than driving to and from work?
 (368) 1 Yes — Ask 9
 2 No — Skip to 10

9. About what percentage of the mileage for this vehicle is for business purposes other than driving to and from work?
 (374) _____ %

10. Was this vehicle purchased within the past 12 months; that is, since (month), 1973?
 (375) 1 Yes — Skip to 13
 2 No — Ask 11

11. In what year was it purchased?
 (376) 19 _____

12. How many thousands of miles was this vehicle driven during the past 12 months?
 (377) _____ (378) _____ (Go to next vehicle or question 20)

13. In what month was it purchased?
 (382) _____

14. How many thousands of miles has this vehicle been driven since you purchased it?
 (383) _____ (384) _____ (385) _____ (386) \$ _____ (387) \$ _____ (388) \$ _____ (389) \$ _____ (390) \$ _____ (391) \$ _____ (392) \$ _____ (393) \$ _____ (394) \$ _____ (395) \$ _____ (396) \$ SAMPLE DESIGN

The estimates are based on data collected in August through October 1974 for the Annual Housing Survey (AHS), which was conducted by the Bureau of the Census, acting as collection agent for the Department of Housing and Urban Development. The sample for this survey was spread over 461 sample areas (called primary sampling units), comprising 923 counties and independent cities with coverage in each of the 50 states and the District of Columbia.

Approximately 71,300 sample housing units (both occupied and vacant) were eligible for interview in the 1974 AHS. Of this number, 2,200 interviews were not obtained because, for occupied housing units, the occupants were not found at home after repeated calls or were unavailable for some other reason, or, for vacant housing units, no informed respondent could be found after repeated visits. In addition to the 71,300, there were also 7,000 sample units which were

visited but found not to provide information relevant to the 1974 housing inventory.

Selection of sample areas.—The United States was divided into areas made up of counties and independent cities referred to as primary sampling units (PSU's). Then the PSU's were grouped into 376 strata, 156 of which consisted of only one PSU which was in sample with certainty. These 156 strata were mostly the larger SMSA's and were called self-representing (SR) since the sample from the sample area represented just that PSU. Each one of the other 220 strata consisted of a group of PSU's and were referred to as non-self-representing (NSR), since the sample of housing units from the sample PSU in a stratum represented the other PSU's in the stratum as well.

One PSU was selected from each NSR stratum with probability proportionate to the 1970 census population of the PSU. (This resulted in 220 NSR sample PSU's.) In addition, the NSR strata were grouped into 110 pairs and one stratum was picked at random from each pair. From this stratum, an additional PSU was selected independent of the other PSU selected from this stratum. Since the two PSU's were independently selected, it was possible for the same PSU to be selected twice. This occurred in 25 instances, producing an additional 85 NSR sample PSU's.

Designation of sample housing units for the 1974 enumeration.—The sample housing units designated to be interviewed in the 1974 enumeration consisted of the following categories, which are described in detail in succeeding sections.

1. All sample housing units that were interviewed in the 1973 enumeration.
2. All 1973 sample housing units that were either Type A noninterviews; i.e., units eligible to be interviewed, or Type B noninterviews; i.e., units not eligible for interview at the time of enumeration but which could become

eligible in the future. (For a list of Type A and Type B noninterviews, see facsimile of 1974 AHS questionnaire, page 1.)

3. All sample housing units that were selected in the 1974 rural supplementation.

4. All sample housing units that were selected from the list of building permits issued since the 1973 enumeration. (This sample represents the housing units built since the 1973 enumeration.)

Selection of the 1973 sample housing units.—The overall sampling rate used to select the sample for the 1973 AHS was about 1 in 1,366. The within-PSU sampling rate for AHS was determined so that the overall probability of selection for each sample housing unit was the same (e.g., if the probability of selecting a NSR PSU was 1 in 10, then the within-PSU sampling rate would be 1 in 136.6).

Within the sample PSU's, a sample of the housing units enumerated in the 1970 Census of Population and Housing was selected for AHS. In addition, a sample of new construction building permits was also selected to represent the units constructed since the 1970 census. These samples were selected at about twice the rate mentioned previously (i.e., at 2 in 1,366), thereby producing a sample twice as large as needed. This sample was split into two equal-sized samples—one to be used for AHS and one to be held in reserve for possible future use for AHS. The procedure used to split this sample into half-samples is described in the next section.

The sample of 1970 census units was selected in several stages of sampling. The first step was the selection of a sample of census enumeration districts (ED's), administrative units used in the 1970 census. The probability of selection for an ED was proportionate to its 1970 population. The next step was to select a cluster of about four neighboring housing units within each sample ED. For

most of the ED's, the selection was accomplished using the list of addresses for the ED as compiled in the 1970 census. However, in those ED's where addresses were incomplete or inadequate (mostly rural areas), the selection process was accomplished using area sampling methods. These ED's were divided into segments; i.e., small land areas with well-defined boundaries having an expected size of four, or a multiple of four, housing units. Those segments with an expected size which was a multiple of four were further subdivided into areas with an expected size of four housing units.

The sample of new construction units was selected from building permits issued since January 1970. Within each sample PSU, the building permits were chronologically ordered by month issued, and compact clusters of approximately four housing units were created. These clusters were then sampled for inclusion in the AHS at the sampling rate of 2 in 1,366. As a result of the area sampling methods described above, housing units constructed since the 1970 census in areas which do not issue building permits were brought into the sample.

Splitting of the sample.—The sample selection procedure as described above produced segments of size-four housing units for the sample taken from the census address frame, the new construction frame, and the area sampling frame (mainly rural areas). One can expect a minimum loss in precision for segments of size-four housing units in rural areas because of the heterogeneity of this type of housing unit. Segments of size two, however, were considered to be more optimal for sampling within those areas where one could expect neighboring units to be very similar (e.g., urban areas and new construction units). It is felt that if one were to go to segments of size-four housing units in this type of area, a significant loss in precision would result. A splitting operation was then carried out for segments selected from the census address and new construction frames. This consisted of halving each segment of four housing units that was selected for

the sample. Two housing units from each segment were to be included in the survey and two were to be held in reserve. No splitting operation was carried out within the segments selected from the area sampling frame; every other area sample segment of four housing units was used for the survey and the remaining segments were assigned to the reserve sample.

Selection of supplemental sample housing units in rural areas.—In 1974, it was decided to increase the reliability of the AHS estimates of rural housing characteristics by doubling the number of sample housing units from rural areas. This was accomplished by reactivating the reserve sample, selected in the original sampling operations in 1973, from rural areas only. For the reserve sample selected in census address and new construction segments, this meant that the other half of the segment (an expected two housing units) was reactivated in 1974 if the segment was rural. Similarly for area segments, this meant the entire reserve segment (an expected four housing units) was reactivated in 1974 if the segment was rural. This supplementation increased the overall probability of selection for sample housing units in rural areas to about 2 in 1,366; whereas, the overall probability of selection for sample housing units in urban areas remained at 1 in 1,366.

ESTIMATION

The 1974 AHS estimates employed a three-stage ratio estimation procedure. However, prior to implementation of the procedure, the basic weight (i.e., the inverse of the probability of selection) was adjusted to account for the Type A non-interview housing units encountered in AHS. This noninterview adjustment was done separately for occupied and vacant units. The noninterview adjustment was equal to the following ratio:

$$\frac{\text{Interviewed housing units} + \text{noninterviewed housing units}}{\text{Interviewed housing units}}$$

The first-stage ratio estimation pro-

cedure was employed for sample housing units from non-self-representing (NSR) PSU's only. The procedure was designed to reduce the contribution to the variance arising from the sampling of PSU's. The first-stage ratio estimation procedure takes into account the differences that existed at the time of the 1970 census in the distribution by tenure and residence of the housing population estimated from the sample NSR PSU's and that of the NSR housing population in each of the four census regions of the country.

The first-stage ratio estimate factor for each specified category was as follows:

The 1970 census housing population in the residence-tenure category for all NSR strata in a census region

Estimate of the housing population category using 1970 census housing counts for sample NSR PSU's in a census region

The numerators of the ratios were calculated by obtaining the 1970 census housing counts for each of the residence-tenure categories for each NSR stratum and summing these counts across the NSR strata in each census region. The denominators were calculated by obtaining the 1970 census housing counts for each of the residence-tenure categories for each NSR sample PSU, weighting these counts by the inverse of the probability of selecting that PSU and summing these weighted counts across the NSR PSU's in each census region.

The computed first-stage ratio estimation factor was then applied to the existing weight for each NSR sample unit in each first-stage ratio estimation category.

The second-stage ratio estimation procedure was only employed for AHS new construction sample units (i.e., sample units built April 1, 1970, or later). This procedure was designed to adjust the AHS sample estimates of new construction units to independently derived current estimates for six categories of new construction units (i.e., four categories for conventional new construction

units and two for new construction mobile homes). This adjustment was necessary so as to correct for known deficiencies in the AHS sample with regard to representation of new construction units (see the section on non-sampling error).

The second-stage ratio estimate factor for each specified category was as follows:

$$\frac{\text{Current independent estimate of new construction units in the category}}{\text{AHS sample estimate of new construction units in the category}}$$

The numerators of the ratios for conventional new construction were derived from data based on the Survey of Construction (SOC), a survey of building permits conducted monthly by the Bureau of the Census. The numerators of the ratios for new construction mobile homes were derived from estimates of mobile home shipments adjusted to account for mobile homes shipped and actually occupied as primary residences.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units, using the existing weight after the first-stage ratio estimation procedure (i.e., the estimates employing the noninterview and first-stage adjustments).

The computed second-stage ratio estimation factor was then applied to the existing weight for each sample unit in each second-stage ratio estimation category.

The third-stage ratio estimation procedure was employed for all AHS sample units. This procedure was designed to adjust the AHS sample estimates of housing (i.e., the estimates employing the noninterview, first-stage, and second-stage adjustments) to independently derived current housing estimates for 4 types of vacant housing units and for 24 residence-tenure-race of head-sex of head categories for occupied housing units.

The third-stage ratio estimate factor for each specified category was as follows:

$$\frac{\text{Current independent estimate of housing units in the category}}{\text{AHS sample estimate of housing units in the category}}$$

The numerators of the ratios for occupied housing units were derived from data based on the Current Population Survey (CPS), a household survey conducted monthly by the Bureau of the Census. The numerators of the ratios for vacant housing units were derived from data based on the Housing Vacancy Survey (HVS), a quarterly vacancy survey conducted by the Bureau of the Census.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units, using the existing weight after the second-stage ratio estimation procedure.

The computed third-stage ratio estimate factor was then applied to the existing weight for each sample unit in each third-stage ratio estimation category.

The second- and third-stage ratio estimation procedures were repeated in an iterative process in order to bring the AHS estimates into close agreement with both sets of independent estimates (i.e., the independent estimates employed for the second-stage ratio estimation process as well as those employed for the third-stage ratio estimation process). The factors resulting from this iterative process were then applied to the existing weight on the appropriate records, and the resulting product was used as the final weight for tabulation.

The effect of the third-stage ratio estimation procedure, as well as the overall estimation procedure, was to reduce the sampling error for most statistics below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection. The distribution of the housing population selected for the sample differed somewhat, by chance, from that of the nation as a whole in such basic housing characteristics as tenure, vacancy status, residence, race of head, and sex of head. These characteristics are probably closely correlated with other housing characteristics measured for AHS. Therefore, through the use of the three-stage ratio estimation procedure, one can expect the sample estimate to be improved substantially when the sample housing population is brought into close agreement

with a known distribution of the entire housing population with respect to these basic housing characteristics.

RELIABILITY OF THE ESTIMATES

There are two types of possible errors associated with estimates based on data from sample surveys, sampling and non-sampling errors. The following is a description of the sampling and nonsampling errors associated with the AHS-National sample.

Sampling errors.—The particular sample used for this survey is one of a large number of possible samples of the same size that could have been selected using the same sample design. Even if the same schedules, instructions, and enumerators were used, estimates from each of the different samples would differ from each other. The deviation of a sample estimate from the average of all possible samples is defined as the sampling error. The standard error of a survey estimate attempts to provide a measure of this variation among the estimates from the possible samples and thus is a measure of the precision with which an estimate from a sample approximates the average result of all possible samples.

As calculated for this report, the standard error also partially measures the variation in the estimates due to response and enumerator errors (non-sampling errors), but it does not measure, as such, any systematic biases in the data. Therefore, the accuracy of the estimates depends on both the sampling and non-sampling errors measured by the standard error and biases and some additional nonsampling errors not measured by the standard error.

The sample estimate and its estimated standard error enable one to construct interval estimates such that the interval includes the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these surveyed under essentially the same general conditions and an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average result of all possible samples may or may not be contained in any particular computed interval. However, for a particular sample one can say with specified confidence that the average result of all possible samples is included in the constructed interval.

The figures presented in the tables below are approximations to the standard errors of various estimates shown in this report. In order to derive standard errors that would be applicable to a wide variety of items and also could be prepared at a moderate cost, a number of approximations were required. As a result, the tables of standard errors provide an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

Tables I and II present the standard errors applicable to housing unit estimates in this report. Table I shows the approximate standard errors applicable to all housing unit estimates except those pertaining to the specified items in the table. The standard errors shown in table II should be used for those specified items. Linear interpolation should be used to determine standard errors for levels of estimates not specifically shown in tables I and II.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which

25,000	183	-
50,000	187	-
75,000	71	-

the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more.

Tables III and IV present the standard errors of estimated percentages. Table III shows the approximate standard errors of all estimated percentages of housing units except those pertaining to the specified items in table II.

The standard errors shown in table IV should be used for those specified items. Two-way linear interpolation should be used to determine standard errors for estimated percentages not specifically shown in tables III and IV.

For ratios, where x is not a subclass of y, the above tables; i.e., tables III and IV, underestimate the standard error of the ratio when there is little or no correlation between x and y. For this type of ratio, a better approximation of the standard error may be obtained by letting the standard error of the ratio be approximately equal to:

$$(100) (x/y) \sqrt{\left(\frac{\sigma_x}{x}\right)^2 + \left(\frac{\sigma_y}{y}\right)^2}$$

- Let x = the numerator
 y = the denominator
 σ_x = the standard error of the numerator
 σ_y = the standard error of the denominator

Illustration of the use of the standard error tables. Illustration 1.—Table A-2 of this report shows that in the United States there were 9,084,000 specified owner-occupied housing units with 2 bedrooms in 1974. Interpolation in table I of this appendix shows that the standard error of an estimate of this size is approximately 107,000. Consequently, the 68-percent confidence interval is from 8,977,000 to 9,191,000 housing units. Therefore, a conclusion that the average estimate, derived from all possible samples, of 1974 owner-occupied housing units with 2 bedrooms lies within a range computed in this way would be correct for roughly

10,000 ...	0.1	0.2	0.3	0.4	0.5	0.6	0.7
25,000 ...	0.1	0.1	0.2	0.3	0.3	0.4	0.4
50,000 ...	0.1	0.1	0.1	0.2	0.2	0.3	0.3

68 percent of all possible samples. Similarly, we could conclude that the average estimate, derived from all possible samples, lies within the interval from 8,913,000 to 9,255,000 housing units with 90 percent confidence; and that the average estimate lies within the interval from 8,870,000 to 9,298,000 housing units with 95 percent confidence.

Table A-2 also shows that of the 9,084,000 specified owner-occupied housing units with two bedrooms, 1,622,000 or 17.9 percent, were of value between \$15,000 and \$19,999. Interpolation in table III (i.e., interpolation on both the base and percent) of this appendix shows that the standard error of the above percentage is approximately .5 percentage points. Consequently, the 68-percent confidence interval, as shown by these data, is from 17.4 to 18.4 percent; the 90-percent confidence interval is from 17.2 to 18.7 percent; and the 95-percent confidence interval is from 16.9 to 18.9 percent.

Illustration 2.—Table A-9 shows that in the Nation there were 147,000 specified

renter-occupied housing units with Spanish head with five persons. Interpolation in table II shows that the standard error of an estimate of this size is approximately 17,000 (table II should be used since this estimate pertains to households with Spanish head). Consequently, we could conclude with 68 percent confidence that the average estimate of 1974 Spanish renter units with five persons lies within the interval from 130,000 to 164,000 housing units. Similarly, the 90-percent confidence interval is from 120,000 to 174,000 housing units; and the 95-percent confidence interval is from 113,000 to 181,000 housing units.

Table A-9 also shows that of the 147,000 specified Spanish renters with five persons, 58,000 or 39.5 percent paid between \$100 to \$149 a month for rent. Interpolation in table IV (i.e., interpolation on both the base and the percent) of this appendix shows that the standard error of the above percentage is approximately 5.9 percentage points. Consequently, the 68-percent confidence inter-

val is from 33.6 to 45.4 percent; the 90-percent confidence interval is from 30.1 to 48.9 percent; and the 95-percent confidence interval is from 27.7 to 51.3 percent.

Differences.—The standard errors shown are not directly applicable to differences between two sample estimates. The standard error of a difference between estimates is approximately equal to the square root of the sum of the squares of the standard errors of each estimate considered separately. This formula is quite accurate for the difference between estimates of the same characteristic in two different areas or the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error.

Illustration of the computation of the standard error of a difference.—Table A-2 of this report shows that in the United States there were 1,575,000 owner-occupied housing units, with two bed-

rooms, valued between \$10,000 and \$14,999 in 1974. Thus the apparent difference between the number of 1974 owner-occupied housing units, with two bedrooms, valued between \$10,000 and \$14,999 and those valued between \$15,000 and \$19,999 is 47,000. Table I shows the standard error of 1,622,000 is approximately 47,000 and the standard error of 1,575,000 is approximately 46,000. Therefore, the standard error of the estimated difference of 47,000 is about

$$66,000 = \sqrt{(47,000)^2 + (46,000)^2}.$$

Consequently, the 68-percent confidence interval for the 47,000 difference is from -19,000 to 113,000 housing units. Therefore, a conclusion that the average estimate, derived from all possible samples of this difference, lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, the 90-percent confidence interval is from -59,000 to 153,000 housing units, and the 95-percent confidence interval is from -85,000 to 179,000. Thus, we *cannot* conclude with 95 percent confidence that the number of 1974 owner-occupied housing units, with two bedrooms, valued between \$15,000 and \$19,999 is *greater* than the number valued between \$10,000 and \$14,999 since the 95-percent confidence interval includes zero or negative values. We also *cannot* conclude with 90 percent confidence, or even 68 percent confidence, that the 1,622,000 is greater than the 1,575,000 since both the 90-percent and 68-percent confidence intervals include zero or negative values.

Medians.—For the medians presented in certain tables, the sampling error depends on the size of the base and on the distribution upon which the median is based. An approximate method for measuring the reliability of the estimated median is to determine an interval about the estimated median such that there is a stated degree of confidence that the average median from all possible samples lies

within the interval. The following procedure may be used to estimate confidence limits of a median based on sample data:

1. From the tables determine the standard error of a 50-percent characteristic on the base of the median;
2. Add to and subtract from 50 percent the standard error determined in step 1; and
3. Using the distribution of the characteristic, read off the confidence interval corresponding to the two points established in step 2.

For about 68 out of 100 possible samples, the average median from all possible samples would lie between these two values.

A two-standard-error confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step 1. For about 95 out of 100 possible samples, the average median from all possible samples would lie between these two values.

Illustration of the computation of the standard error of a median.—Table A-2 of this report shows the median value of owner-occupied housing units with two bedrooms was \$19,900 in 1974. The base of the distribution, from which this median was determined is 9,084,000 housing units.

1. Table III shows that the standard error of 50 percent on a base of 9,084,000 is approximately .6 percentage points.
2. To obtain a two-standard error confidence interval on the estimated median, add to and subtract from 50 percent twice the standard error determined in 1. This yields percentage limits of 48.8 and 51.2.
3. From table A-2, it can be seen by cumulating the frequencies for the first three categories that 2,950,000 owner-occupied housing units with two bedrooms, or 32.5 percent, had a value less than \$15,000, and an additional 1,622,000 owner-occupied housing units with two bedrooms, or 17.9 percent, had a value between

\$15,000 and \$19,999, and an additional 1,379,000, or 15.2 percent, had a value between \$20,000 and \$24,999. By linear interpolation, the lower limit of the 95-percent confidence interval is found to be about

$$\$15,000 + (\$20,000 - \$15,000) \left(\frac{48.8 - 32.5}{17.9} \right) = \$19,600$$

Similarly, the upper limit of the 95-percent confidence interval is found to be about

$$\$20,000 + (\$25,000 - \$20,000) \left(\frac{51.2 - 32.5 - 17.9}{15.2} \right) = \$20,300$$

Thus the 95-percent confidence interval ranges from \$19,600 to \$20,300.

Nonsampling errors.—In general, nonsampling errors can be attributed to many sources: Inability to obtain information about all cases, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, mistakes in recording or coding the data, and other errors of collection, response, processing, coverage, and estimation for missing data. As can be seen from the above list, nonsampling errors are not unique to sample surveys since they can, and do, occur in complete censuses as well.

Obtaining a measurement of the total nonsampling error associated with the estimates from a survey is very difficult, considering the number of possible sources of error. However, for the 1974 AHS-National sample, a study was conducted to obtain a measurement of some of the nonsampling errors associated with the AHS estimates. A reinterview program was conducted for a sample of the AHS households. These households were revisited and answers to some of the questions on the AHS questionnaire were obtained again. The two observations (i.e., the original interview and the reinterview) were assumed to be two independent readings and thus were the basis for the measurement of the accuracy of the AHS estimates.

As part of the reinterview, a check was made at each of these households to deter-

mine if the following was done during the original interview:

1. The correct unit was visited.
2. The correct number of housing units was interviewed at that address.
3. The correct information on "Year Built" was obtained.
4. The correct information on "Tenure" was obtained.
5. The correct information on "Household Composition" was obtained.
6. The correct information on "Type of Housing Unit" was obtained.
7. The correct information on "Occupancy Status" was obtained.

This check was for interviewer evaluation and control.

The results of the reinterview study are presented in the Census Bureau memorandum, "Reinterview Results for the Annual Housing Survey—National Sample: 1974." Twenty-five items were included in the reinterview, some for the first time. The estimated indexes of inconsistency of these items ranged from 4 to 35 with most items in the 20 to 30 range. (A 20-50 interval is considered moderate on a range of 0-100 with a high index associated with a high level of response variability.) The items with the higher levels of inconsistency tended to be the attitude and opinion items which were expected to have higher inconsistency levels.

The 1970 census reinterview results provided illustrations of possible nonsampling errors for some of the items which also appear in the AHS. For example,

median value of homes was consistently underestimated by about 5 percent, and the average monthly costs of electricity and utility gas were consistently overestimated although the effect on the average gross rent figures was fairly small.

A possible explanation for the results of the AHS and census reinterview studies, as well as the surveys themselves, is that the data are based on the answers given by the respondents, who may lack precise information. Also, the results of the reinterview studies are derived from sample surveys so there is sampling error associated with these estimates of non-sampling error.

With respect to errors of coverage and estimation for missing data, it was mentioned previously in the section on estimation that the AHS new construction sample had deficiencies with regard to the representation of both conventional new construction in permit-issuing areas and new construction mobile homes. During the sampling of building permits, only those issued January 1, 1970, or later were eligible to be sampled to represent conventional new construction in permit-issuing areas. It had been assumed that units with permits issued prior to 1970 would have been completed by the time of the 1970 census (i.e., April 1970) and therefore would have been represented in the sample selected from 1970 census units. However, it has been estimated that the 1974 AHS sample missed about 7 percent (i.e., about 600,000 units) of all conventional new construction (i.e., in both permit-issuing and non-permit-issuing areas) because the permits for

these units, which were built after April 1970, were issued before 1970.

In addition, unlike the procedure for conventional new construction, there is no sampling procedure specifically for new construction mobile homes. New mobile homes in area segments, however, do come into the AHS sample. In addition, new mobile homes in address segments also come into sample if the mobile homes are located in mobile home parks, identified as such in the 1970 census. However, new mobile homes in address segments that are located in mobile home parks, not in existence at the time of the 1970 census or not identified as such in the 1970 census, have no chance of coming into the AHS sample. It has been estimated that the 1974 AHS sample missed about one-fourth of all new mobile homes (i.e., about 400,000 units). The second-stage ratio estimation procedure was employed to reduce the effect of both these deficiencies, although some bias in the AHS sample still exists.

With respect to errors associated with processing, the rounding of estimates introduces another source of error in the data, the severity of which depends on the statistic being measured. The effect of rounding is significant relative to the sampling error only for small percentages, median number of persons, and median number of rooms when these figures are derived from relatively large bases. This means that confidence intervals formed from the standard errors given may be distorted, and this should be taken into account when considering the results of the survey.

TABLE FINDING GUIDE—Cross-Classification of Subjects by Type of Area and Table Number

This guide lists all subjects covered in this report. Data are shown for owner and renter occupied units.

Tables with prefix letter "A" are for the United States total, "B" for the Northeast region, "C" for the North Central region, "D" for the South region, and "E" for the West region.

Subject	United States Inside SMSA's In central cities Not in central cities Outside SMSA's Region total
